Education

The University of Alberta, Edmonton, Alberta, Canada

Bachelor of Science in Computer Science, Minor in Biology

Awards: International Student Admission Scholarship,
International Country Scholarship

Graduated: June 2025

Authorized to work in Canada through 10/2028

Expertise

- **Full Stack Web and Cross-Platform Development** *React.js, React Native, Javascript, Python, PostgreSQL*
 - Designed and developed visually appealing, user-friendly frontends with React.js, Vue.js and React Native for web and mobile
 - Developed efficient REST APIs on the backend with Django, handling authentication, business logic, and data processing
 - Conceptualized and created ACID-compliant database models using PostgreSQL and SQLite, translating custom requirements into practical, evolving schemas
 - Collaborated in teams of 4–7 on complex, extended projects, leading with example as the opportunity presented
- **Artificial Intelligence and Generative Tools** *Android Studio, Java, Kotlin, SQLite, Firebase*
 - Extensively adopted AI coding tools to automate repetitive tasks, write boilerplate code, and implement complex designs from scratch, while maintaining rigorous oversight over every line to ensure optimal functionality and excellent code quality
 - Designed a RAG pipeline comprising document vectorisation, vector DB staging, and semantic query retrieval to handle abstract natural language queries over a large corporate document corpus
 - Integrated LLMs via API into production applications, applying iterative prompt engineering to polish response tone
 - Experience with the broader LLM engineering stack involving LoRA quantization, RLHF, fine-tuning, and agentic workflows with model context protocol
- **Data Science** *Python, Numpy, Pandas, Scikit-learn*
 - Processed, cleaned, and analysed complex datasets from Kaggle and other online sources with Pandas, Numpy, and Matplotlib in Python to discover meaningful statistical insights
 - Applied and fine-tuned conventional machine learning models, adjusting hyperparameters, evaluating performance and improving key metrics using Scikit-Learn

Experience

- **Software Engineer - Enzene Biosciences Ltd** *Sept 2025 - Nov 2025* *OCR, LLM, Document Processing, Python*
A leading pharmaceutical development and manufacturing organization involved in producing biosimilar therapeutics for cancer, autoimmune, metabolic, and other chronic conditions.
 - Developed a proof-of-concept document digitization demo by extracting over 30000 tokens from scanned and handwritten records using optical character recognition
 - Structured and curated document text to be used as context for large language models, enabling natural-language querying over previously unstructured data
 - Performed validation checks to ensure OCR inputs and LLM outputs were accurate and usable

Projects

- **Solo Developer - Retrospection** *Feb 2026 - May 2026* *React.js, OpenAI API, Python, Firebase, Prompt Engineering*
An AI-powered journaling companion app designed for mindful daily reflection through chat-based interactions
 - Leveraged AI coding tools to create a chat-based conversational journaling application in React and Django, while maintaining rigorous oversight over code quality, architecture, and engineering decisions
 - Integrated OpenAI GPT-5 Nano with iterative prompt engineering to respond with concise, open-ended observations and questions aimed at inspiring meditative introspection
 - Designed and implemented a minimalist UI using subtle background gradients, soft visual animations, and readability-focused typography to create a clean, distraction-free user experience
 - Integrated Firebase authentication to enable secure and streamlined user login/signup
- **Product Owner - TennisLinked** *Jan 2025 - Apr 2025* *React Native, Django, Python, Javascript, PostgreSQL*
A cross-platform tennis matchmaking and coaching app designed to connect local players and the broader community
 - Acting as the Product Owner, facilitated ongoing communication between stakeholders and the client while serving as a liaison to the 7-member development team
 - Developed custom Django REST APIs for match scheduling, court booking, and score logging, ensuring seamless data exchange between the React Native frontend and backend
 - Designed the core model structure for the database including PostgreSQL table setup and UML class diagram

Activities

- Cat Caregiving Volunteer - Alberta Animal Rescue Crew Society (AARCS) 2024-2025
- Office and Grocery Volunteer - UAlberta Campus Food Bank 2024-2025
- Software team - AlbertaLoop - UAlberta's Hyperloop Club 2020-2021
